**Melamine Cupboard and Drawer
Range Complete with Grass[®]
drawer systems and hinges**

ECL CASEWORK

STANDARD CUPBOARD DESIGNS

Our cupboards are made of 18mm melamine with high impact PVC edging on all drawers and doors. We use top quality grass hinges and drawer runners with the option of basic motion, to more modern soft close systems depending on the what the design demands.

Suspended type cupboards are 500mm deep, and are inserted into steel framework via locking catches leaving a gap of 180mm to the floor.

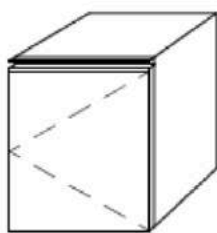

Standard widths for storage cupboards are: 500mm, 600mm, 900mm, 1000mm and under sink and fume cabinet base cabinets of 1200mm and 1500mm. All under-bench units are 500mm deep and designed for a 900mm high work surface.

Moveable type cupboards have 100mm high lockable castors.

Wall cupboards are 300mm deep and 600mm high.

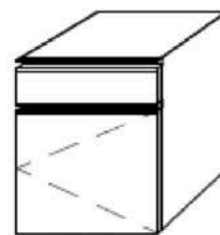

ECL offers a wide range of cupboard and draw unit handles to ensure that the desired laboratory aesthetic is achieved. Our standard cupboard door and drawer handle is a full width aluminum extrusion. This is a very robust and easy to clean handle. The handle is finished with an epoxy/polyester coating that is offered in a range of colours. Stainless steel or brushed aluminum 'D' handles and bar can be fitted as an alternative to the full width extruded handle.
